Hostel management system project report doc

Displayed 1 - 4 out of 4 results

U do you use this product? Write a review of Time Used: Over 2 Years Review Source: Capterra Pros This product is ideal for budgeting, managing and predicting the cost of a construction project. It is also software that I use daily to manage subcontractors and contracts throughout the life cycle of a construction project. I highly recommend spifire to anyone in the industry! Cons:Spifire doesn't offer much support or training for people in the organization who are less tech savvy. It would be useful to have a FAQ page and some video tutorials. Lisa of Appleton Lathing CorporationAppleton Lathing Corporation is a commercial subcontractor specializing in the steel stud/drywall industry. We also offer services in acoustic ceiling, finished carbining, EIFS, and Spray Par barrier installation. The projects we are implementing range from local community churches to multimillion-dollar facilities. We saw areas in our information processing between the office, the department and our customers that needed increased efficiency and reliability. We needed a document management solution that not only seamlessly integrates with our accounting system, but also helped us to keep a better job on work issues in real time. We strive for efficiency in this area and have decided to set the same standard of excellence for our office and landscaping forewoman. Spifire software was by far the only software solution that could meet all our needs. We installed the Spifire in 2007 and within a day they were in operation. It provides everything the construction company is looking for in project management and also keep up with the rapidly changing pace of technology. Spifire is not only a great product and user friendly, but customer service is excellent as well! The Spifire led us through every step of the implementation, which led us to a successful launch, and training us to fully and comfortably take over. Whenever we have questions or needs, we receive answers and solutions very timely. We are grateful to say that we are part of the Spifire family! Silverman CPM is a true Building Program Management Company. We provide professional services as a representative of the owner and lead all participants in the project at each stage of construction. The Spifire was made to better manage the complete business. One area of great value was in the budget/forecasting part of the integrated system. After processing their own spreadsheet, all project managers now use the standard product for better analysis from start to finish. Another area of benefit is cooperation with third-party business partners, which includes: Owners, contractors, engineers, architects and other project consultants. Now the information is exchanged in a wide range of documents, such as: Records and packages, Drawing Logs, Request for Information, Request a Proposal, Change Orders, Meeting Minutes, Contract Compliance, etc. This provides an online exchange of information kept records that were once done handing around manual documents in hand done in a manner or through courier and FAX. I would recommend it to others in the A/E/C market. Kevin from Advanced RoofingOur organization includes a large roofing contractor and solar installer. Since the implementation of the Spifire project management system, we have seen a great return on our investment. From making it easier for accounting staff to allow our project managers to track the cost of working in real time and actively catch problems, all this saves the company money. The system is easy to operate and dynamic for more than one company. The support team went the extra mile to make sure everything was suitable for our business. The latest update on November 27th, 2020 Where you work has a huge impact on how you work – on your ability to focus (and focus) and your overall ability to be productive. This means that the design of your office, whether you work at home or in a larger company environment, is of the u highest importance. It's not just about Feng Shui, it's about producing results and how things are done. According to studies on workplace and productivity, the most important factor in determining an employee's ability to focus on their physical environment. In fact, it has been said that a well-designed office can increase your productivity by 20%. However, despite studies and statistics, almost half of employers surveyed do not consider workplace design to be a good business investment. So what is a productivity hack to do? What if you work in an environment that doesn't support focus? Check these 15 factors and make changes where you can. A small adjustment can have a big impact. LightingLighting is one of the most important factors in staying focused and feeling inspired to create, but it's one of the most overlooked and least invested in. Poor lighting can cause fatigue, eye fatigue, headaches and general irritability. Dark spaces can actually produce depression. If you work in the company's office: You probably have no control over your general lighting, so bring your own, if necessary. Consider using natural light bulbs or light therapy equipment. If you work from a home office: Open windows and doors and let natural light in. Use lamps in different areas on cloudy days or when it's dark. Chair and tableIf you have ever sat at a table to do the job, but found yourself adjusting, stretching and moving too often to actually concentrate, then you are aware of the importance of having a properly mounted table and chair. In today's work environment, where so many of us sit for most of our day, it is important that your throne fits your body probably. Consider these quick ergonomic checks: Eyes 24-36 inches from your computer screen. The top of the monitor should be below or at eye level. The legs should be on the footrest or resting on the floor. Slightly inclined chair body is best to reduce pressure on the spine and minimize the lower back back If you work in a company office: Request an adjustable chair. Add pillows for lower back or buttocks if you need it. Many companies will also provide risers for computers to adjust the height of your computer screen (and a separate keyboard to keep your hands and wrists in an ideal position)If you're working from a home office: Invest in a decent chair or at least use a few pillows to make the chair more comfortable. If the table is too tall, add pillows to the chair. If it's too low, consider buying foot risers from your local hardware store and using books under your computer to increase your screen. Use a separate keyboard. ClutterOur mom was right, it's important to clean up your room. Clutter can help the creative mind create, but it is not necessarily useful for focus and productivity. If you work from the company's office: Even if you can't control the cleanliness of the office as a whole, keep your own environment clean around you. Spend 10 minutes every morning or evening making sure things are delayed, filed, organized and generally out of sight, so you're not distracted by it later. If you work from a home office: Because you work from home, an entire house or apartment is a potential for distraction. If you can afford it, hire a professional cleaning service to keep your home clean. If not, plan a specific day and time to clean your home. Commit to that daily pickup at a certain time. And spend at least 10 minutes every day making sure your office is organized and tidy. The color of the roomColors around us affect our mood and brain function. It evokes both physical and emotional response. So choosing the right colors for your workspace has the ability to affect your productivity. For example, blue was said to be illegal productivity. Remember that too much anything can be overwhelming, even colors. If you work from the company's office: Bring items from home that are a certain color that inspires you and keeps you focused. Use postcards, magazine cutouts, even just blocks of color will do. If you work from a home office: If you work from home, you have much more control over the colors around you. Consider repainting the wall, adding color to the table you're working on, or hanging pictures that are dominated by a specific color. Room temperatureSome offices keep their temperatures around 65-68 Fahrenheit, but it turns out that it may not be good for productivity. Warmer rooms actually make people more productive. If you work from a company office: Most offices are regulated by someone else, so bring a space heater, sweaters and blankets to your workspace. If you work from a home office: Depending on the season, open windows or adjust the temperature or a/c to make you more comfortable and warmer. Pile on sweaters in winter or add a heater legroom. Fragrance RoomYou like the color of the space you work in, our sense of smell can significantly our mood, our thinking and thus our productivity. Consider adding fragrances to your work Spring your mind into focus when you start noticing you are drifting off. Try to use these scents to stay focused: Pine - Increases alertness Cinnamon - Improves the focus of Lavender - Helps relax you during a stressful working day Peppermint - Lifts the mood citrus (any) - Wakes you up and lifts the mood If you work from the company office: Most people will not appreciate the added scent to their work environment, so you have to keep fine. Keep essential oils in your bag or drawer, and when you're in need of support put a few drops on a handkerchief or cotton swab. If you work from a home office: Use candles, incense or essential oils. You can also simmer herbs and spices in the kitchen to fill your home with a warm aroma. Noise level Noise pollution in the working environment can vary considerably depending on the size of the team, with the team, with the team, with the team, with the team and with the culture of the company. But don't bee, the noise around you affects your ability to stay on a roll. Not only can it be disruptive, it can also increase stress levels, making your ability to maintain productivity much more difficult. If you work from the company's office: Bring noise canceling headphones and use music services like Spotify or Songza to select concentration-enhancing sounds, such as white noise. See if your office offers quiet workspaces for times when you need maximum focus. If you work from a home office: Sometimes complete silence can be just as intrusive as an office. Use a service such as Coffivity to mimic the noise of a cafe that has been said to help with concentration. AirAir air quality can significantly affect our ability to concentrate and think clearly. Get this: OSHA estimates that the total annual cost of poor air quality in office environments costs employers \$15 billion due to worker inefficiencies and sick leave, yes, it's a serious thing. If you work from the company's office: Talk to them about installing air filters. If there is a way to bring fresh air through windows or doors, arrange for them to be opened for at least part of the day. If nothing else, get a personal air filter to have on your desk or nearby. Also, get a plant (or better yet, have a company buy and use more plants in the office). Plants are great for filtering air and providing clean, purified oxygen. If you work from a home office: Open windows and doors and leave in the fresh air. Install an air filter or get a portable air filter that stays close to your desk. And yes, you should get a plant, too. Different spacesIf you can manage it, give yourself more than one space to work. Putting you in a new space with different characteristics and what to look for literally shifts your brain and helps you stay focused. If you work from an office company: Many offices offer a variety of environments to work from: your personal space, halls, break out rooms, conference rooms kitchens and dining areas, and if you're lucky, also lounges. Use all these spaces to change the Make sure your supervisor knows so I don't think you're slacking off and know tat you're actually getting more done! If you work from a home office: If you work at a desk, add a comfortable couch or chair to the room. If your space is less flexible or ultra small, think about more creative ways to change your workspace. Rotate the pictures on the walls every few days. Sit on the other side of the table. Get a lamp and more colored light bulbs. Or go work in a coffee shop, library or park.Organize peoplemost employers to organize employees around work functions or in specific divisions. Instead, studies show that people are more creative and productive when sitting down with colleagues who have the same goal or client. Not only are you able to get answers and create solutions faster, but because you are directly accountable to the people around you, you are more likely to stay on a roll and productive. If you work from a company office: Ask your employer if you can experiment by grouping a group in a conference room for a day or a week. Get feedback from everyone involved. View results. If your company doesn't make permanent adjustments, you may be able to collaborate several times a week when the conference room or lounge is free. If you work from a home office: It's a little harder because when you work at home, you're not with colleagues. However, you can recreate a similar space digitally. Create a Skype group and everyone signs in during business hours. You can do morning responsibilities and check-in while remaining available for questions, deal-finding and general banter that encourages creativity. Idea StorageEver worked hard when you suddenly distracted by a great idea? At first you try to push away, but then the next thing you know you're 20 pages deep into online searching on the subject. Ideas should be promoted and cultivated, but when they come right in the middle of another task it can be incredibly disruptive. Instead, create a place to store your ideas that are easily accessible from your workspace. For both the company and the home office: Keep the paper pads around, have a chalk wall, get a white board - when you have a spark of inspiration to write it right away, take it out of your head then go back to the task at hand. Then, at the end of the day, or when you have free time, collect all the ideas and explore them. With a little time and space you can better decide whether it's worth watching or better to leave on the back-burner. Snacks Our brains need nutrition to continue, especially when we drive hard and stay focused. You can let the rumbling stomach continue only as long as the brain shuts down. Assuming your other is like wanting your car to continue driving without having to stop and fill it with gas. A new idea, but not realistic. If you work from the company's office: Pre-make day and/or week. Or bring your pre-packaged prepackaged Keep in mind that junk food has the properties of declining yields, so if you're buying food packaged think nuts, fruits, unsweetened yogurts, and hummus and biscuits. Chances are your company provides coffee, tea and water, so don't worry about supplying that to yourself. If you work from a home office: If you work from home, this can be a key distraction. Try to reduce the number when you walk into the kitchen every day. To do this, keep fast and simple snacks pre-made or packaged ready and close to your table. Keep the water bottle nearby. And consider putting a kettle in your office and storing tea and coffee so you're not tempted to wander around the house and waste your time poking through the pantry. Bring in nature We are biological creatures, first and foremost. So we are deeply affected by our approach to (or lack of) the natural world. This is important for our psychological and physiological functioning, which directly affects our ability to be productive. If you work from a company office: If you don't have windows in or near your workspace, bring pictures of the outside world. Keep a picture of something natural like a screen saver and/or wallpaper. Take walks outside for lunch or between the main tasks. Just a few minutes outside in the fresh air and sun can boost our mood and shake the doldrums. Be sure to add the plant to the table, too! If you work from a home office: Keep shades open, and if possible, leave in the fresh air. If you don't see anything natural out the window, take pictures of the natural world as a screen saver and/or wallpaper. Take walks. Or just get out and put your feet on the ground. Put plants in your office – research shows that having live plants in your office makes you more productive, happier and less stressed. Digital spaceFor most people, our primary work is caught in our laptops and our physical environment is simply the backdrop to our digital life. Make sure your computer has software to help you carve out the digital environment that best triggers productivity. Use focus applications like this or this to reduce distractions. Or design your day with app intervals like this to stay on top of your maximum focus throughout the day. Best photo credit: Phil Desforges via unsplash.com unsplash.com
